SUBJECT: Motivation Letter for College Admission

Dear sir/ Madam,

With this letter I would like to express my interest and which cause me to be inspired in applying in the Poland University in bachelor degree program, in the stream of mathematics.

I always have a great passion for mathematics it analytical and logical approach had been. The main reason why I was so attracted to this subject is that, mathematics knowledge and skills I will develop in university will help me to success in wide range of field because skills I got there I can use it across other subjects and applied in many different jobs roles, for instance accounting, banking, and others.

Mathematics also will make me problem solver not only to solve mathematical equation and even in our daily life problem like partner spotting, visualisation and using in logical reasoning, to study mathematics in Poland also will lead me to have good quality of education because Poland has developed education level compared to other countries.

After completing my education, I will put into practice the knowledge and skills I got from there, that why I will return back to my home country, to working in mathematics research or teaching, so I will be able to utilise the experience obtained from poland to rise the level of mathematics up in my country.

I am now looking forward to becoming the world class mathematician and I believe that this university will shape me into my dreams, thank you I believe that my motivation letter would convey the right sprit of motivation from my side for this program of the university I am very much positive and looking forward to hearing your positive response.

Faithfully

SIBOMANA Emmanuel
